COMPANY PROFILE

© 2026 Euronet Technologies LLC. All rights reserved.

Established in 2004, EURONET is an energy technology enterprise focusing on solar power conversion and power management. The company has achieved annual revenue exceeding \$100 million, its diverse portfolio spans new energy, power electronics and Smart IoT Products to support its mission to become a global leader in energy solutions.

OUR MISSION

Delivering practical, scalable solutions that strengthen industries, enable infrastructure and support long-term development.

OUR VISION

Building a globally integrated technology company that connects innovation, energy and infrastructure to the needs of tomorrow.

STRENGTHENING MARKETS. ADVANCING INDUSTRIES.

Cross-Sector Industry Expertise

Euronet operates across 15+ industrial sectors, enabling the company to serve diverse market requirements through an integrated portfolio of products, technologies and supply capabilities. This broad sectoral expertise strengthens our ability to deliver solutions across industries and regions.

Brand Associations

Euronet has established 90+ associations, integrating diverse technologies, products and capabilities across its network. These strategic associations reinforce our ability to address evolving market requirements, strengthen our solution portfolio and deliver reliable solutions across multiple regions.

Investing Locally

Euronet continues to strengthen its presence across 25+ markets, building closer connections with customers, partners and local industries. Through a long-term, market-focused approach, we continue expanding our international footprint.

Addressing Global Energy Demand

More than 2 billion people worldwide continue to face limitations in access to reliable and sustainable energy. Euronet addresses this fundamental demand through supporting the evolving energy requirements of communities and industries across global markets.

MILESTONES

2004

Established in Dubai, UAE, marking the beginning of Euronet's power electronics journey.

2010

Established a dedicated renewable energy portfolio with 50+ product categories for emerging markets.

2017

Strengthened operations across Africa, building distribution channels and local market presence across key regional markets.

2024

Euronet expanded into AI-driven energy management, intelligent monitoring, and connected power solutions, strengthening its transition toward smarter energy infrastructure.

2007

Distribution expanded across the GCC, including Saudi Arabia, Kuwait and Oman.

2013

Expanded beyond the Middle East, reaching 25 countries and adding 500+ distributor partners.

2020

Surpassed 1 million power electronic products supplied, marking a major sales milestone across energy and power categories.

2026

Today, Euronet serves 140+ countries, 3,000+ distributors and 250+ SKUs, supported by regional hubs across the Middle East and Africa.

GLOBAL PRESENCE

Global Offices

Operating through **6** strategic locations worldwide.

Markets Reached

Commercial presence across **140+** countries.

Channel Partners

Network of **3,000+** distribution partners.

Installer Network

Connected with **10,000+** installers globally.

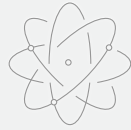

Corporate Entities

Corporate presence through **20+** registered companies.

FROM DESIGN TO DELIVERY

TECHNOLOGY AND INNOVATION

Advancing technology through continuous product evolution, combining intelligent functionality with application-driven development for emerging global requirements.

Next-Generation
Technology Integration

Continuous Product
Architecture Development

Market-Specific Technology
Adaptation

SMART MANUFACTURING

Leveraging advanced manufacturing capabilities to achieve greater precision, consistency and production efficiency across its product portfolio.

80%+ Production
Automation

100% Product-Level
Inspection

End-to-End Production
Traceability

TESTING AND CERTIFICATION

Applying structured validation processes to ensure product performance, safety and conformity across diverse operating environments.

Multi-Stage Product
Validation

International Certification
Compliance

Environmental &
Performance Testing

CUSTOMER SUPPORT

Maintaining a responsive support framework designed to provide continuity throughout the product lifecycle across international markets.

Regional Technical
Assistance

Warranty & Service
Coordination

Multi-Market Support
Network

ONE GLOBAL PROVIDER FOR ALL ENERGY NEEDS

Euronet provides a comprehensive portfolio of energy and power solutions, spanning solar generation, power conversion, energy storage, power protection, electrical distribution, charging and intelligent energy management. The portfolio extends from core components to complete systems, supporting residential, commercial, industrial and utility applications across global markets.

SKUs

With 250+ SKUs, Euronet delivers a diversified product ecosystem addressing energy requirements across multiple sectors and applications.

PATENTS

With 50+ patents, Euronet continues to strengthen its proprietary technology portfolio through product engineering, technical development and application-driven innovation.

PORTFOLIO ADVANCEMENT

Euronet introduces 30+ new products and product variants annually, in response to emerging technologies, evolving applications and changing market requirements.

RESIDENTIAL SOLAR SOLUTIONS

Euronet's residential solar solutions are developed for villas, houses, and residential buildings, supporting both new installations and energy system upgrades with flexible architectures for everyday power use, backup, and long-term energy management. Hybrid, on-grid and off-grid configurations allow installers to specify a system that matches the property's load profile and local supply conditions rather than a fixed setup.

Inverter capacities range from 1 kW to **30 kW** across residential power requirements.

Hybrid, on-grid and off-grid architectures support flexible home energy configurations.

Compatible with a wide range of solar modules and battery technologies.

Multiple operating modes support different **residential power** conditions.

Built-in MPPT, battery compatibility and integrated protection simplify **complete residential system design**.

COMMERCIAL SOLAR SOLUTIONS

Euronet's commercial solar portfolio covers integrated solutions for offices, retail spaces, warehouses, commercial buildings, and other business facilities. The portfolio includes solar modules, inverters, energy storage, protection systems, and intelligent monitoring, supporting scalable system configurations across a wide range of commercial applications.

Suitable for offices, **warehouses, retail, hospitality,** and **commercial facilities**.

Scalable system capacities from **50 kW to multi-MW** commercial installations.

24/7 intelligent monitoring for generation, consumption, alarms, and system performance.

Designed for **25+ years of solar system** operation, supporting long-term commercial energy infrastructure.

High-efficiency inverter platforms delivering **98%+** conversion efficiency.

SOLAR LIGHTING SOLUTIONS

Euronet's solar lighting solutions address a wide range of outdoor and off-grid lighting applications across municipal infrastructure, highways, streets, industrial facilities, commercial areas, parking spaces, public parks, campuses, and rural communities. Designed around independent solar power architecture, these systems operate without connection to the utility grid.

Lighting capacities range from **200 W to 1,000 W** across street and flood lighting applications.

Grid-independent architecture supports **flexible deployment** without conventional power infrastructure.

Selected systems support **3+ nights** of battery autonomy for continuous operation.

All-in-one designs integrate solar generation, energy storage, and LED lighting.

IP65/IP66 protection supports reliable outdoor performance in demanding environments.

AGRICULTURAL SOLAR SOLUTIONS

Euronet's agricultural solar solutions support modern farming, irrigation infrastructure, livestock operations, and remote water supply applications. The portfolio combines solar-powered pumping, motor control, and water management technologies for agricultural environments ranging from small farms to large commercial estates and off-grid rural projects.

Submersible pump solutions support water heads of up to **200 metres**.

Solar pump inverter capacities range from **1.5 kW to 30 kW**.

Direct **solar operation, MPPT control, and integrated protection** enable flexible off-grid deployment.

Surface pump configurations are available from **2-inch to 4-inch** sizes.

Supports irrigation, borewell extraction, livestock watering, and remote water supply.

UPS AND TELECOM SOLUTIONS

Euronet's critical power portfolio supports telecommunications networks, data centres, enterprise IT, security infrastructure, industrial systems, and other applications requiring continuous and stable power. The range combines UPS systems, VRLA battery technologies, power conditioning, and intelligent monitoring to support both centralized facilities and distributed telecom infrastructure.

UPS capacities extend from **700 VA to 40 kVA** across offline, line-interactive, and online platforms.

VRLA battery platforms cover **4V-12V** configurations with capacities extending up to **250 Ah**.

Online double-conversion systems provide **0 ms transfer time** for critical loads.

Flexible backup architectures integrate UPS, battery banks, remote monitoring, and power management.

Supports **telecom sites, server rooms, data centres, security systems, and industrial infrastructure**.

ELECTRICAL AND POWER SOLUTIONS

Euronet's electrical and power portfolio is developed around the DC infrastructure required for modern solar and renewable energy systems, supporting safe and efficient power transmission, distribution, isolation, and protection across residential, commercial, industrial, and utility-scale applications, forming the essential link between photovoltaic generation, inverters, battery systems, and downstream electrical equipment.

Solar DC cables support ratings up to **1.5 kV DC** for photovoltaic installations.

PV combiner solutions feature **1,000 V DC ratings with IP65 outdoor protection**.

DC protection devices support currents up to **250A** for higher-power solar circuits.

Supports complete **DC-side connectivity and protection** from the PV array through to the inverter.

Covers **solar cables, connectors, breakers, isolators, surge protection and DC distribution**.

COMPLETE ECOSYSTEM

TELECOM & DATA CENTER Telecom and data center solutions delivering reliable power, uptime, and energy efficiency.	POWER UTILITY Power utility solutions delivering reliable, scalable energy infrastructure for modern grids.	IoT DEVICES IoT device solutions enabling smart connectivity, real-time monitoring, and efficient energy management.
OEM OEM solutions delivering customized, reliable solar and power components for diverse manufacturing needs.	SECURITY Security solutions delivering reliable power, surveillance support, and uninterrupted protection.	INDUSTRY Industrial solutions delivering high-capacity, reliable power to support continuous and efficient operations.

myEuronet Application

myEuronet is the official app for Euronet customers, distributors, installers, and partners. Browse catalogues, compare solutions, access specifications, save products, and stay updated across solar, batteries, power and electrical, security, surveillance, and IoT.
